

ROYAL MILITARY ACADEMY, SANDHURST

HARGREAVES DRAINAGE LIMITED

Hargreaves Drainage supplied the rainwater goods for this renovation project at the Royal Military Academy Sandhurst in Camberley.

The building's gutters had become blocked and rusty, requiring their replacement and that of all the other rainwater goods. New cast iron guttering now adorns the building, which also boasts restored roofline chimneys, repaired lintels on the rear elevation, and newly decorated external timber surfaces.

Premier Extra Sand Cast rectangular rainwater pipes, gutters fittings and rainwater heads and Traditional Express push-fit soil pipes and fittings were supplied.

Hargreaves Drainage was able to produce bespoke products thanks to its pattern making, foundry and fabrication facilities and experience to match existing designs.

Gutter manufacturing process for the Sandhurst project
