

**GRANT HOUSE, FORRES, INVERNESS  
LINDAB BUILDING PRODUCTS LIMITED**

This larch cladded, timber frame construction is situated within a beautiful silver birch woodland site in the north of Scotland.

A galvanised rainwater system was selected for the one and a half storey, two bedroom detached house by architect David Dittman. Client, Kevin Grant, says, “Rainline was specified by our architect, however, I have seen it used extensively in the area and was particularly keen to have it myself anyway”.

Local contractor MacGillivray Construction was used for the build, the rainwater system was purchased through online merchant Roofing Superstore.

The client was pleased with the product and submitted the project as an entry to our My Rainline competition. Mr Grant has since built a garage and will be installing a matching Rainline system himself.
