

## SAINT-GOBAIN PROVIDES THE FINISHING TOUCH TO PRESTIGIOUS DEVELOPMENT

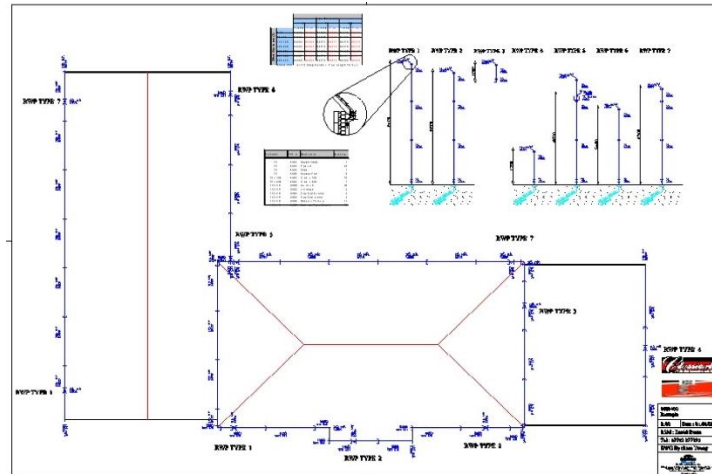

Saint-Gobain's Classical Plus rainwater system was selected for a prestigious new build project in the heart of the Essex countryside.

The client said that for this project which included a manor house, two gatehouses, and a barn conversion he was looking for a system that would not only showcase the buildings, but be versatile enough to use on the bespoke new build project.

After considering all the options, the client decided that the Saint-Gobain Classical Plus system was the perfect fit. Classical Plus is a traditional cast iron rainwater and gutter system, pre-painted in high performance semi-gloss finished coat, and designed for immediate installation.

The client also took advantage of the Saint-Gobain take-off and scheduling service providing him with a complete set of drawings with product codes added as well as a fully priced schedule for the items required; a service which he was very pleased to find out was supplied without charge.

Cast iron has a proven long life span and it is not uncommon for it to exceed 100 years. Cast iron is also the sustainable choice; it uses 97 percent recycled material in the manufacture of gutters and rainwater systems, which in turn are 100 percent recyclable at the end of life. This eliminates unnecessary replacement and waste by not adding to landfill.
