

**HIDDENGLLEN, LAIKENBUIE, NR NAIRN**

**SAINT GOBAIN PAM**

Saint Gobain PAM UK Cyclone steel guttering has been specified on a very prestigious carbon neutral, eco-friendly development of holiday homes set on the croft of Laikenbuie, close to Nairn, a seaside town beside the Moray Firth in the Scottish highlands.

Cyclone was specified due to its sustainability credentials and the fact that steel has the lowest carbon footprint of all materials used to manufacture rain water products.

The developer had identified that Saint Gobain is at the forefront of developing eco-friendly products for the construction industry. Cyclone's features and benefits and the fact it is the lowest cost steel system in the UK today finally sealed the deal.

Ideal for traditional and modern buildings and for both new build and refurbishment applications, the lightweight Cyclone range offers a cost-effective alternative to plastic gutters, with the strength and longevity of a steel system.

With no risk of shrinking, leaking or colour fading over its guaranteed life, the steel system is easy to install with no specialist tools or skills required. In addition, very little maintenance is needed, only the general industry recommended twice yearly cleaning of any debris collected in the gutter, and washing down with warm soapy water.

As part of their eco-friendly credentials, the homes also have ground source heat pumps, solar panels and green roofs. The interiors are spacious and made from traditional, re-cycled and well insulated modern materials.
