## Architectural Rainwater Systems

**ALUMASC**  
RAINWATER SYSTEMS

### CPD Seminar Contents

#### Design Requirements

- Rainwater System Design
- Rainwater Intensity
- Maintenance

#### Architectural Design

#### Choice of Material

- Heritage Cast Aluminium or Cast Iron
- Contemporary Aluminium
- Available Profiles

#### Summary

The Alumasc Architectural Rainwater Systems CPD seminar aims to give a detailed understanding of the design and material requirements for rainwater disposal from pitched roofs. Rainwater disposal design requirement calculations are based on BS EN 12056- 3: 2000 system design for drainage of roofs and paved areas.

Alumasc offers a range of market-leading aluminium gutter and downpipe systems, each incorporating unique stylistic and functional design features. Aluminium gutters and downpipes can be used in different combinations to suit individual project requirements, including integration with aluminium fascia / soffits. A cast iron gutter and downpipe system is available for use on historic and restoration sites.

### Additional CPD Seminars

Alumasc is fully committed to the rationale behind Continuing Professional Development, namely maintaining professionalism and competence alongside enhancing career development and personal satisfaction. Alumasc offer a range of seminars approved by the Royal Institute of British Architects (RIBA) and the CPD Certification Service (CPDCS), as listed below:

- Internal Drainage: A Complete Solution
- Green/Garden Roof Systems
- The Criteria for Flat Roofing
- Structural Waterproofing Systems
- External Wall Insulation for New Build
- External Wall Insulation for Refurbishment
