

OSWESTRY HEALTH CENTRE, SHROPSHIRE
GUTTERCREST LIMITED

A £9 million renovation scheme to convert a number of 19th century Grade II listed railway buildings into a state-of-the-art medical centre has incorporated a number of Guttercrest products into the redevelopment of the railway works in Oswestry, Shropshire.

Guttercrest's traditional round cast downpipes, beaded deep flow guttering and mortar/rise and fall brackets were specified for the renovation and were inspired by 19th century cast iron downpipes and gutters. The products were specified in cast aluminium, an ideal choice for restoring a period building as cast aluminium rainwater systems can be used to replicate the often very ornate guttering that is found on older buildings.

All Guttercrest products are cast from marine grade aluminium, a responsible eco-choice as aluminium is 100 per cent infinitely recyclable, without losing any of its characteristics. Cast aluminium is maintenance-free, resistant to corrosion and lightweight.

Built of local red brick in 1865, the Cambrian Railway works undertook most of the casting, fabrication, assembly and repairs for the Cambrian Railways. Since its closure in the 1960s, the works' buildings have been used for a variety of purposes, including an antiques centre and small business hub before Oswestry Health Centre opened on this site as a multi-purpose outpatient healthcare centre.
