

HOLY TRINITY & ALL SAINTS CHURCH, COATBRIDGE, SCOTLAND
SAINT GOBAIN PAM UK

The Holy Trinity & All Saints church in Coatbridge, North Lanarkshire Scotland recently needed to replace its entire roof including the cast iron rainwater system

This category C building at the boundary of the towns of Airdrie and Coatbridge has been awarded £113,500 for urgent repair works to the church roof and stonework. The award has come from the Heritage Lottery Fund (HLF) as part of a tranche of funding for Scotland's historic churches, securing the future of four places of worship that were in urgent need of repair.

Architects, the Comprehensive Design Partnership were happy for Saint Gobain PAM to manufacture and supply the specially- designed gutter following a recent presentation on St Gobain's capabilities and its Classical cast iron rainwater system.

A sample of the existing rose gutter was removed and cleaned. A pattern was made for approval after which the 56 lengths of gutter and fittings were manufactured in the Telford manufacturing facility.

Saint Gobain was chosen to supply this product because of their ability to make special product in a very short time frame.

John Fulton Plumbers, a PAM-accredited installer purchased the £25,000 value of the product via Ashworth of Bellshill.
