## **ALUMASC RAINWATER IMPROVES LEAD TIMES ACROSS RANGE**

Leading metal rainwater manufacturer, Alumasc Rainwater, has improved its lead times across its range. Customers now benefit from reduced lead times on its contemporary pressed and extruded aluminium gutters and downpipes and standard Skyline Copings. This follows the recently reduced lead times on Alumasc Rainwater's Heritage Cast Aluminium range.

National Sales Manager Pete Wainer says: "Reducing lead times for our Heritage Cast Aluminium, from 10 working days to 7, has proved so popular with customers we're now offering faster lead times for all our rainwater products. Our Contemporary range in particular is available much quicker than before; with products such as Aqualine Extruded Gutters in a polyester powder-coated finish now available in 12 working days, down from 20.

"Improving our lead times is part of an ongoing commitment to provide the best service we can for our merchant and contractor customers," continues Pete. "This is particularly important at a time where skills shortages are having a major impact on projects.

Contractors look for reliable, easy to install and high quality products, with a wide choice in design and colour, so they can complete their projects as quickly and as professionally as possible. Our high performance rainwater products, together with faster lead times mean they can get on with the job."

To find out more and to request a copy of the new lead times call 0808 100 2008.
