

# BIM Objects are Now Available for Lindab Rainwater Systems

Our latest Revit families simplify Rainline and Magestic specification

We are excited to announce that Lindab can now offer collaborative support for architects and specifiers by providing Building Information Modelling components for our rainwater systems.

The comprehensive file package includes gutter systems and downpipe systems with complete specification information. Components in 2D and 3D have support on item level, 46 different gutter types and accessory families from the gutter down to the foot of the pipe can be used to correctly build up a system and add parameters to the Revit schedule.

**Download the BIM files to use in future projects: [BIM for Lindab Building Products](#)**

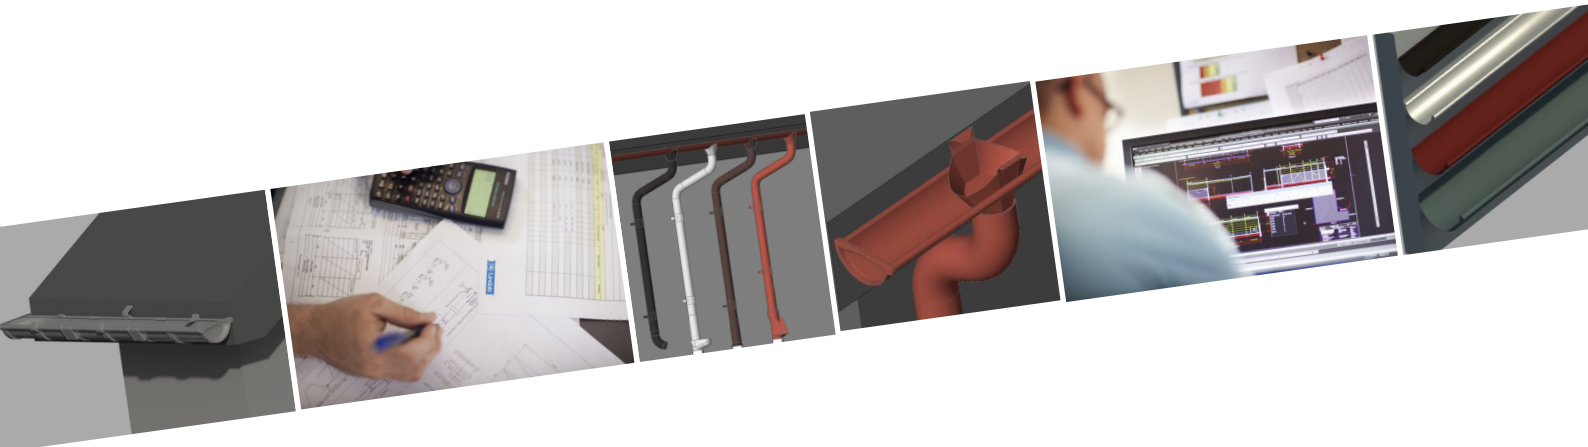

Simplifying construction is part of Lindab's DNA, this has been the driving force behind investing in these resources which will aid customers to integrate Rainline and Magestic gutters, pipe and accessories into a project design.

We will continue our work to increase the number of items, product sizes, support and functionality for the future versions of Rainline BIM. A concise user guide which provides both an overview of the existing files and clear, step-by-step examples is also provided.

**View the free user guide: [Introductory Manual for Rainline BIM](#)**

The BIM objects are designed for use with Autodesk Revit 2016.
