

NEW BUILD HOME, SWINDON
GUTTERCREST LIMITED

A luxury private house in Swindon has been fitted with three different sizes of bespoke moulded aluminium gutters from Guttercrest.

The owners of the property - a modern new build executive home, built in Georgian style with sash windows and stone pillars – wanted to make a stand-out feature of the eaves. Guttercrest worked with the customer's ambition and drawings to manufacture a set of bespoke aluminium guttering.

Over 80 metres of special gutter in the moulded ogee style was manufactured as three-metre lengths in RAL 9010, pure white.

The main house features the largest of the special guttering 400 x 400mm; followed by the garage roof which incorporated 270 x 300mm and the utility room, using 197 x 197mm.

Forty-eight metres of contrasting black aluminium rectangular downpipe 100 x 75mm completes the look of the house.

Guttercrest specialise in the manufacture of special or bespoke aluminium guttering for residential, commercial and industrial buildings. With two factory units based in Shropshire and heavy investment in machinery and skilled labour, they can produce almost any size and shape rainwater system.
