IMPROVED LEAD TIMES FOR ALUMASC'S HERITAGE CAST ALUMINIUM RAINWATER GOODS

Alumasc Rainwater has improved its lead times for its popular range of polyester powder coated (PPC) Heritage cast aluminium gutters and downpipes. Builders' merchants can now expect their order in seven working days, reduced from 10 working days.

National Sales Manager Pete Wainer says: "In an increasingly competitive market, it's important we give our customers the best in choice and availability. This latest development confirms our ongoing commitment to improving our systems and processes so merchants get the products they need as quickly as possible."

Alumasc Rainwater's range of Heritage cast aluminium gutters and downpipes are suitable for both traditional and contemporary buildings, and is a cost effective alternative to cast iron. The range is easy to handle and fix, lightweight, non-corrodible, durable with a life expectancy of 40 years, and 100% recyclable. It also benefits from BBA approved in-house factory applied polyester powder coating, and leads with a choice of 26 standard colours. Any BS or RAL colour is available to special order.

Pete Wainer adds: “Our heritage cast aluminium range is a specification driven product and the improved lead time ensures contractors can complete their job in even quicker timescales. The range is ideal for contractors looking for a reliable and easy to install metal rainwater solution, and our unique and wide choice of colours means we can service projects on an order by order basis.”
