

MUNICIPAL BUILDINGS, DUMBARTON
SAINT-GOBAIN PAM UK

Saint-Gobain PAM's Classical rainwater system has been specified as part of the upgrade of the historic Municipal Buildings in Dumbarton. The work is being carried out as part of a £1.4 million overhaul of the buildings and is being undertaken in two phases to allow the building to remain open during the renovation.

The Municipal Buildings are category B listed and it was important therefore that the refurbishment remained sympathetic to the character of the original premises. Saint-Gobain's Classical cast iron rainwater system was chosen to maintain architectural integrity and building aesthetics and this is the second phase of the project that Saint-Gobain PAM has supplied.

The Classical 6 x 4 gutter system was chosen for the quality and service that a UK manufacturer can provide. Designed in accordance with BS 640, the Classical range is recognised for its aesthetic charm, ability to withstand high winds and heavy snow and, above all, its long life capabilities. Cast iron is naturally durable up to 100 years and is cost effective, requiring minimal maintenance.

The refurbishment of the Municipal Buildings is part of a £19 million project to move staff into modern, fit for purpose office space across the area and reduce the number of buildings being used by the council. The refurbishment is scheduled for completion in August 2017 and councillors and staff will move in by November 2017.

Main contractor: CBC, Glasgow

Installer: John Fulton Plumbing & Heating, Glasgow
