

DEMENTIA VILLAGE, BRUFF
ALU-CAST ENTERPRISES LTD

Alu-Cast's pressed aluminium fascia, box gutters and 3" swaged round downpipes have been chosen by main contractors Conack Construction Limited for this purpose-built dementia village in Bruff, Co. Limerick.

Set on a 4-acre site, this is Ireland's first purpose-built community for people living with dementia. It consists of three large blocks, each containing six private living spaces with a garden. It also boasts a large reception area which comprises of a café, gym and hair salon to cater for all needs.

Alu-Cast's works on this build entailed the fitting of our pressed aluminium fascia, our specially designed box gutter and 3" round swaged downpipes to complete this modern look care centre. All these materials were powder coated in RAL7012 to seamlessly blend in with the grey roof.

The fascia and box gutter were all manufactured in three metre lengths by Alu-Cast's manufacturing team. The fascia measured 750mm high with a 50mm drip lip and was fitted with hidden screws every .5 of a metre. The box gutter was fitted using a direct fixing method where they are again screwed every .5 of a metre through the back of the gutter. Alu-cast's 3" round swaged downpipes were then fitted using brackets and hammer in fixings. These fitting methods were essential in achieving a smooth and modern look.

All Alu-cast products can be made to order for each specific project and all Alu-cast products can be powder coated in any RAL colour in either plain or textured finish.
