

**LUXURY HOMES, FLAMSTEAD**  
**GUTTERCREST LIMITED**

A development of four characterful country homes has been enhanced with the addition of Guttercrest's aluminium guttering and downpipes.

The developer chose a classic moulded ogee shaped aluminium gutter in heritage black complemented by matching cast round aluminium downpipe as a contrast to the white timber cladding.

The development consists of four new energy efficient homes in the picturesque village of Flamstead, Hertfordshire. Each home has a highly energy efficient and low polluting air-source heat pump.

With a guide price in excess of £1.3million, each home is finished to the highest of specifications using the finest of materials and finishes with sustainability in mind.

Aluminium moulded ogee gutters are the ideal choice for a sustainable new build. Offering the traditional look of cast iron with all the benefits of aluminium guttering, being lightweight, environmentally friendly and easy to install and maintain.

Guttercrest traditional moulded ogee gutters are pre-drilled ready to be directly back-fixed, so requiring no brackets. They also comply with British Standard BS9101:207.

Available in a wide range of colours and finishes, Guttercrest manufacture all of their products from their 65,000 square feet Shropshire factories.
