

EAVES GUTTER DESIGN FLOW

The MGMA eaves gutter design flow chart overleaf is intended to enable the user to perform calculations to BS EN12056-3:2000. By entering simple information relating to building dimensions, geographical location and proposed gutter style, the flow chart will provide guidance on gutter specification. The flow chart is intended as a guide for straightforward eaves gutter applications.

To select the gutter size appropriate to your requirements, two factors must be taken into consideration, namely roof area and gutter flow capacity. Gutter flow capacity is dependent upon system type, outlet position and whether the gutter is laid level or to a specified fall. The flow chart is based on the recommendations from BS EN 12056-3:2000 *Roof drainage, layout and calculation*.

Further advice and guidance is available from any MGMA member company whose details can be found on the MGMA website at www.mgma.co.uk.
