

**THE HOLY TRINITY & ALL SAINTS CHURCH, COATBRIDGE**

**SAINT GOBAIN PAM UK LTD**

Saint Gobain PAM UK was invited to supply the Archdiocese of Glasgow with a replacement cast iron rainwater system for the listed church of Holy Trinity and All Saints Church which was built in 1902. The church required a completely new roof after 100 years of Scottish weather and the original cast iron gutter and downpipes were completely beyond refurbishment.

The Comprehensive Design Partnership was delighted that Saint Gobain PAM would be able to manufacture and supply the unusual gutter profile following an earlier CPD presentation.

A sample of the rose patterned gutter was removed from site, then sandblasted, a pattern made for approval by the architects and contractors, finally allowing the gutters and fittings to be manufactured and installed all with the Saint Gobain PAM's standard BS460 75mm cast iron downpipe.

John Fulton Plumbing and Roofing, a Saint Gobain PAM accredited installer was the chosen contractor for the project including the replacement of the cast iron rainwater system.

Ashworth was the Saint Gobain PAM distributor to the project and provided the scheduled deliveries to John Fulton premises in Glasgow allowing them to cut and protect the gutter before applying the specified coloured finish.
