

BULLOCKS FARM, ESSEX

LINDAB LIMITED

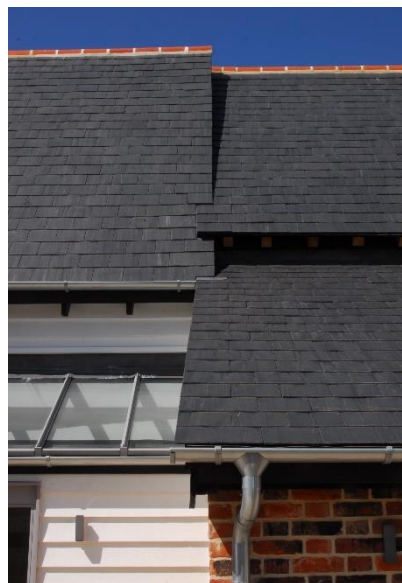

Award winning architectural practice Pocknell Studio were tasked with renovating deteriorating, redundant, two-storey structures in addition to creating new field barns to create spectacular accommodation for a fabulous countryside holiday retreat.

This architect has a long-standing preference for using Rainline for their projects, so it was no surprise when the galvanised steel guttering and downpipes were specified for the North and South Barns. The silver metallic colour option was a perfect selection for the hipped roof design with black and white palette.

The field bands are finished in a contemporary take on the traditional black Essex barn and designed to fit into a typical country environment. The brick and timber clad buildings are finished with not only Lindab Rainline rainwater system but also Lindab Seamline standing seam roofing system.

The valley roof and staggered facade design was a particular challenge which required careful detailing and installation to ensure steep falls which allow rapid drainage.

Bullocks Farm has tried to create *“a quiet haven for people visiting the area and have made each property as comfortable, relaxing and practical as possible”*. The architects are very happy that the project has been successful for the client and further development of the site will continue.

Lindab products used:

Lindab Rainline steel rainwater system
Lindab Seamline standing seem roofing

In association with:

Bullocks Farm, Essex
