

Seamless Aluminium Guttering

SHINGLER HOMES, BASCHURCH SHREWSBURY

Seamless aluminium guttering is an affordable site formed product, which has very few joints, simplifying installation and reducing the risk of joint leakage in future.

In this example, Shingler Homes, who are an independent housing developer keen to provide individual, attractive homes that are sympathetic to their surroundings, commissioned an MGMA member to supply seamless aluminium guttering systems for the development.

They felt that seamless aluminium guttering was the obvious choice, as it is produced on site from coated aluminium coil, roll formed in continuous lengths of up to 30 metres. Brackets, stop ends and outlets are installed at ground level before the finished section is raised to roof line level for the final fixing. As the gutter lengths are cut to size on site, there is no waste and the aluminium coil is made from recycled aluminium, which once it reaches the end of its useful life, can be further recycled.

Seamless aluminium gutter systems are an ideal solution for housing developments as they are a strong, sustainable, leak-free, no maintenance option, which has a life expectancy in excess of 30 years.
